

Diagnosis - Function Test (Retractable Rear Head Restraints)

Preparation for Test:

1. Check fuse F4-3 and fuse F4-11.
2. Battery voltage 11 – 14 V.
3. Ignition: **ON**.
4. Rear head restraints raised.

Test step/Test scope	Test condition	Nominal value	Possible cause/Remedy ¹⁾
⇒ 1.0 Retract rear head restraints	Activate rear head restraint release switch (S52) momentarily.	Both rear head restraints retract.	<p>Rear head restraints do not retract and pump motor in PSE control module (A37) does not run.</p> <p>23 PSE ⇒ 1.0, 23 ⇒ 1.0.</p> <p>Rear head restraints do not retract even though pump motor in PSE control module (A37) runs.</p> <p>32 PSE ⇒ 8.0, 32 ⇒ 1.0.</p>

¹⁾ Observe Preparation for Test, see 22.

Note: The retraction of the rear head restraints may not be synchronized. One headrest retracting a few seconds before or after the other is normal and should not be considered a defect.
